

## Silent Install for Non-Boeing Computers

To use VSClient VPN at Boeing, you download VSClient software from our website, install it, open the software, choose a script, and connect. This card describes how to download and install VSClient software.

1. From the VSClient Download web page (<http://compsec.web.boeing.com/products/access/vpn/altvpn/downloads/?pid=altvpn.dl>), select the Boeing VSClient VPN 5.1e Silent Install for Non-Boeing Computers.
2. In the **Save As** dialog box, specify a folder for the self-extracting zip file (vsc-boeing\_51e\_2\_silent\_nogina.exe).
3. Double-click the vsc-boeing\_51e\_2\_silent\_nogina.exe file in the folder to start the Boeing-specific installation.
4. In the **Boeing VSClient 5.1e Install** box, click **OK** to continue or **Cancel** to end the installation.

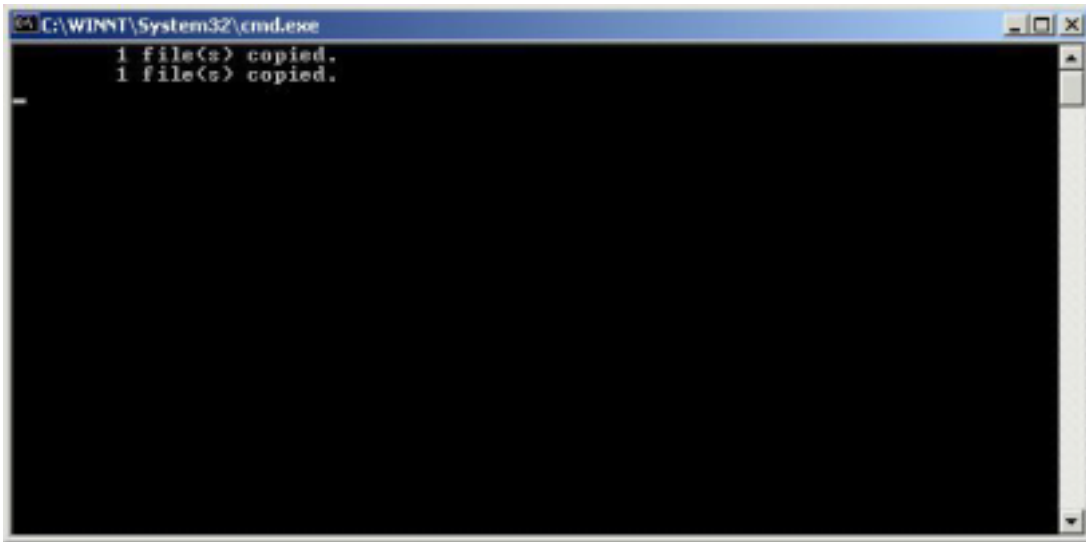

5. In the **WinZip Self-Extractor** box, click the **Setup** button to proceed. You can also click **Cancel** to end the installation.

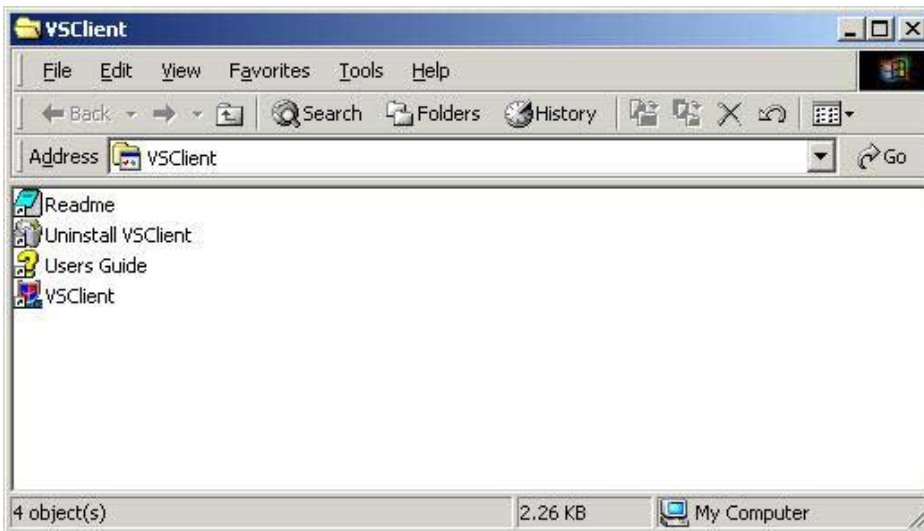

**Note:** If you click **About**, you go to the following box, which describes the product version, and you click **OK** to return to the previous box to continue the installation.

6. The following DOS window appears after the Setup program successfully creates the VSClient install directory and copies two Boeing installation-specific files into the install directory. This box closes automatically when the install process is complete.

7. The VSClient window appears on your desktop during installation. This is the “Start | Programs” folder for the application. Close the window.

8. When the **Install** box appears, you must reboot your system before the installation is complete you can use the application. Click the **OK** button to reboot or select **Cancel** to return to Windows and reboot later.
